About

Introduction

The methodology of School 21 makes sense only if peer-to-peer reviews are done seriously. Please read all guidelines carefully before starting the review.

- Please, stay courteous, polite, respectful and constructive in all communications during t his review.
- Highlight possible malfunctions of the work done by the person and take the time to disc uss and debate it.
- Keep in mind that sometimes there can be differences in interpretation of the tasks and t he scope of features. Please, stay open-minded to the vision of the other.
- If you have not finished the project yet, it is compulsory to read the entire instruction bef ore starting the review.

Guidelines

- Evaluate only the files that are in src folder on the GIT repository of the student or group.
- Ensure to start reviewing a group project only when the team is present in full.
- Use special flags in the checklist to report, for example, an "empty work" if repository do es not contain the work of the student (or group) in the src folder of the develop branch, or "cheat" in case of cheating or if the student (or group) are unable to explain their work at a ny time during review as well as if one of the points below is not met. However, except for cheating cases, you are encouraged to continue reviewing the project to identify the proble ms that caused the situation in order to avoid them at the next review.
- Doublecheck that the GIT repository is the one corresponding to the student or the group.
- Meticulously check that nothing malicious has been used to mislead you.
- In controversial cases, remember that the checklist determines only the general order of the check. The final decision on project evaluation remains with the reviewer.

Main part

Exercise 00

(point1 varchar, point2 varchar, cost numeric);

insert into nodes values ('a','b',10); insert into nodes values ('b','a',10);

insert into nodes values ('b','c',35); insert into nodes values ('c','b',35);

```
insert into nodes values ('c', 'a', 15);
    insert into nodes values ('a', 'c', 15);
    insert into nodes values ('c','d',30);
    insert into nodes values ('d','c',30);
    insert into nodes values ('a', 'd', 20);
    insert into nodes values ('d','a',20);
    insert into nodes values ('b', 'd', 25);
    insert into nodes values ('d', 'b', 25);
- The next command solves classical TSP
    with t as (
    with recursive _n as
    (select point1,
          point2,
         cost,
          1 as level,
         array[point1] AS path,
          FALSE AS cycle,
         array[cost] AS costs
    from nodes
    where point1 = 'a'
    union all
    select nodes.point1,
          nodes.point2,
          nodes.cost+_n.cost as cost,
         _n.level+1 as level,
         _n.path || nodes.point1 AS path,
         nodes.point1 = ANY (_n.path) AS cycle,
         _n.costs || nodes.cost AS costs
    from nodes inner join _n on _n.point2 = nodes.point1 and not cycle
    select
       cost - costs[5] as total_cost,
       path as tour
    from _n
    where level =5 and
       'a' = ANY(path) and
       'b' = ANY(path) and
       'c' = ANY(path) and
       'd' = ANY(path)
      and path[1] = path[5]
    order by cost, path)
    select distinct *
    from t
    where total_cost = (select min(total_cost) from t)
     order by 1,2;
- The result is below
```

```
"80" "{a,b,d,c,a}"
"80" "{a,c,d,b,a}"

No  Yes
```

Checks for the exercise 01

Exercise 01

- The next command with t as (with recursive _n as (select point1, point2, cost. 1 as level, array[point1] AS path, FALSE AS cycle, array[cost] AS costs from nodes where point1 = 'a' union all select nodes.point1, nodes.point2, nodes.cost+_n.cost as cost, _n.level+1 as level, _n.path || nodes.point1 AS path, nodes.point1 = ANY (_n.path) AS cycle, _n.costs || nodes.cost AS costs from nodes inner join _n on _n.point2 = nodes.point1 and not cycle) select cost - costs[5] as total_cost, path as tour from _n

- The result is below

order by 1,2;

from t

where level =5 and
'a' = ANY(path) and
'b' = ANY(path) and
'c' = ANY(path) and
'd' = ANY(path)

order by cost, path)
select distinct *

and path[1] = path[5]

where total_cost = (select min(total_cost) from t) or total_cost = (select max(total_cost) from t)

```
"80" "{a,b,d,c,a}"
"80" "{a,c,d,b,a}"
```

```
"95" "{a,b,c,d,a}"
"95" "{a,c,b,d,a}"
"95" "{a,d,b,c,a}"
"95" "{a,d,c,b,a}"
```

Fails (i)

Cheat Empty work Forbidden functions
